

Fabrizio Luciano Armada

Backend Developer

fabrizioarmada3@gmail.com | San Salvador de Jujuy, Argentina
linkedin.com/in/fabrizio3 | github.com/fabrizio323

PROFESSIONAL SUMMARY

Backend Developer specialized in Java and Spring Boot. Expert in building robust systems with clean architecture, exception handling, and JWT security. Focused on scalable REST API development, design patterns implementation, and clean code best practices.

TECHNICAL SKILLS

Languages & Frameworks: Java 21, Spring Boot, Spring Security, Spring Data JPA
Security & Auth: JWT, Spring Security
Databases: PostgreSQL, MySQL, JPA, Hibernate
Testing: JUnit, Mockito, Integration Testing
DevOps & Tools: Docker, Maven, Git, Swagger, OpenAPI
Architecture: REST APIs, Clean Architecture, Microservices

PROFESSIONAL EXPERIENCE

Head of IT Secretariat of Welfare – National University of Jujuy	April 2025 - Present
- Administration of IT infrastructure and institutional technical support - Management and maintenance of equipment, systems, and technological resources - Implementation of technological solutions to optimize administrative processes - Resolution of technical incidents in equipment, networks, and systems	
Backend Developer Dev Jujuy	April 2025 - March 2026
- Development of REST APIs for system integration - Implementation of backend services using Java and Spring Boot - Development of applications based on microservices architecture - Integration with PostgreSQL databases - API documentation with Swagger / OpenAPI	
Support Teacher – Programming Structured Programming in C++	February 2025 - Present
- Teaching fundamentals of structured programming in C++ - Explanation of programming logic, control structures, and functions - Support for students in solving exercises and academic projects	

FEATURED PROJECTS

EasyCommerce Complete e-commerce backend developed with Java and Spring Boot	Commercialized Project
Implementation of persistent shopping cart with session management	

- Checkout system with price snapshots for transactional integrity
- Role and permission control with Spring Security and JWT
- Clean architecture with layer separation and design patterns
- Production deployment on Render with PostgreSQL database

Technologies: Java 21, Spring Boot, Spring Security, JWT, JPA, Hibernate, PostgreSQL, Docker, Maven

EDUCATION

University Programmer Analyst

Faculty of Engineering – National University of Jujuy (UNJu)

CERTIFICATIONS

REST API Development with Spring Boot

Todo Code Academy

July 2024

Microservices with Spring Cloud

Todo Code Academy

September 2024
